

## AutoFlosser™ Notch Modification

The AutoFlosser notch is a small adjustment on the tissue side of a hybrid restoration that makes daily cleaning easier. It helps guide the AutoFlosser tip into place so floss can pass smoothly to the oral side of the prosthesis. This simple modification improves hygiene and patient compliance—without changing the look, comfort, or function of the restoration.

### PRE MODIFICATION

### CENTERING NOTCH WITH BRASSELER H78E

### PASSING NOTCH WITH BRASSELER H260

### POST MODIFICATION (OUTLINED IN BLACK)
